Modeling in Materials Processing By Jonathan A. Dantzig, Charles L. Tucker

Mathematical modeling and computer simulation are useful tools for improving materials processing. While courses in materials processing have covered modeling, they have traditionally been devoted to one particular class of materials, that is, polymers, metals, or ceramics. This text offers a different approach, presenting an integrated treatment of metallic and non-metallic materials. The authors show that a common base of knowledge - specifically, the fundamentals of heat transfer and fluid mechanics - provides a unifying theme for these seemingly disparate areas. Emphasis is placed on understanding basic physical phenomena and knowing how to include them in a model. The book also treats selected numerical methods, showing the relationship between the physical system, analytical solution, and the numerical scheme. A wealth of practical, realistic examples are provided, as well as homework exercises. Students, and practising engineers who must deal with a wide variety of materials and processing problems, will benefit from the unified treatment presented in this book.

Editorial Review

Review

"Highly recommended." B. Platzer, Zeitschrift für Angewandte Mathematik und Mechanik

"Dantzig and Tucker's much-needed book fills a gap in the engineering library....A must-have for professional engineers, graduate students, and research workers in the area of materials processing." Choice

Users Review

From reader reviews:

Agnes Higa:

Book is actually written, printed, or descriptive for everything. You can know everything you want by a guide. Book has a different type. To be sure that book is important thing to bring us around the world. Adjacent to that you can your reading skill was fluently. A reserve Modeling in Materials Processing will make you to always be smarter. You can feel much more confidence if you can know about every thing. But some of you think this open or reading a new book make you bored. It is not necessarily make you fun. Why they are often thought like that? Have you trying to find best book or suited book with you?

Jennifer Wadsworth:

In this 21st centuries, people become competitive in each way. By being competitive right now, people have do something to make these individuals survives, being in the middle of the crowded place and notice by means of surrounding. One thing that occasionally many people have underestimated this for a while is reading. Yeah, by reading a guide your ability to survive enhance then having chance to endure than other is high. For yourself who want to start reading any book, we give you this specific Modeling in Materials Processing book as beginner and daily reading guide. Why, because this book is more than just a book.

Helen Hanson:

You can obtain this Modeling in Materials Processing by check out the bookstore or Mall. Just viewing or reviewing it might to be your solve issue if you get difficulties to your knowledge. Kinds of this publication are various. Not only by means of written or printed but in addition can you enjoy this book by e-book. In the modern era similar to now, you just looking of your mobile phone and searching what your problem. Right now, choose your ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still up-date. Let's try to choose appropriate ways for you.

Jesse Ward:

Reading a publication make you to get more knowledge from that. You can take knowledge and information from your book. Book is composed or printed or illustrated from each source this filled update of news. On this modern era like right now, many ways to get information are available for a person. From media social similar to newspaper, magazines, science guide, encyclopedia, reference book, book and comic. You can add your understanding by that book. Are you hip to spend your spare time to spread out your book? Or just trying to find the Modeling in Materials Processing when you required it?
