Geometrical methods of mathematical physics

BERNARD SCHUTZ

Geometrical Methods of Mathematical Physics

By Bernard F. Schutz

Geometrical Methods of Mathematical Physics By Bernard F. Schutz

In recent years the methods of modern differential geometry have become of considerable importance in theoretical physics and have found application in relativity and cosmology, high-energy physics and field theory, thermodynamics, fluid dynamics and mechanics. This textbook provides an introduction to these methods - in particular Lie derivatives, Lie groups and differential forms - and covers their extensive applications to theoretical physics. The reader is assumed to have some familiarity with advanced calculus, linear algebra and a little elementary operator theory. The advanced physics undergraduate should therefore find the presentation quite accessible. This account will prove valuable for those with backgrounds in physics and applied mathematics who desire an introduction to the subject. Having studied the book, the reader will be able to comprehend research papers that use this mathematics and follow more advanced pure-mathematical expositions.

Editorial Review

Review

"...excellent. It would require a great deal of delving in the literature to produce equivalent treatments....a very useful introduction...." J. M. Stewart, Journal of Fluid Mechanics

"...Schutz has such a mastery of the material that it soon becomes clear that one is in authoritative hands....this book is the most lucid I have come across at this level of exposition. It is eminently suitable for a graduate course (indeed, the more academically able undergraduates should be able to cope with most of it), and the applications should suffice to persuade any physicist or applied mathematician of its importance." Ray d'Inverno, Times Higher Education Supplement

About the Author

Bernard Schutz has done research and teaching in general relativity and especially its applications in astronomy since 1970. He is the author of more than 200 publications, including A First Course in General Relativity and Gravity from the Ground Up (both published by Cambridge University Press). Schutz currently specialises in gravitational wave research, studying the theory of potential sources and designing new methods for analysing the data from current and planned detectors. He is a member of most of the current large-scale gravitational wave projects: GEO600 (of which he is a PI), the LIGO Scientific Collaboration, and LISA. Schutz is a Director of the Max Planck Institute for Gravitational Physics, also known as the Albert Einstein Institute (AEI), in Potsdam, Germany. He holds a part-time chair in Physics and Astronomy at Cardiff University, Wales, as well as honorary professorships at Potsdam and Hanover universities in Germany. Educated in the USA, he taught physics and astronomy for twenty years at Cardiff before moving to Germany in 1995 to the newly-founded AEI. In 1998 he founded the open-access online journal Living Reviews in Relativity. The Living Reviews family now includes six journals. In 2006 he was awarded the Amaldi Gold Medal of the Italian Society for Gravitation (SIGRAV), and in 2011 he received an honorary DSc from the University of Glasgow. He is a Fellow of the American Physical Society and the Institute of Physics, an Honorary Fellow of the Royal Astronomical Society, and a member of the Learned Society of Wales, the German Academy of Natural Sciences Leopoldina and the Royal Society of Arts and Sciences, Uppsala.

Users Review

From reader reviews:

Alicia Mendes:

Do you have favorite book? Should you have, what is your favorite's book? Publication is very important thing for us to understand everything in the world. Each guide has different aim as well as goal; it means that book has different type. Some people sense enjoy to spend their a chance to read a book. They can be reading whatever they acquire because their hobby will be reading a book. Why not the person who don't like reading through a book? Sometime, man or woman feel need book after they found difficult problem or exercise. Well, probably you will want this Geometrical Methods of Mathematical Physics.

Nancy Page:

Now a day people who Living in the era just where everything reachable by connect with the internet and the resources inside it can be true or not need people to be aware of each information they get. How many people to be smart in obtaining any information nowadays? Of course the reply is reading a book. Reading through a book can help men and women out of this uncertainty Information mainly this Geometrical Methods of Mathematical Physics book because this book offers you rich info and knowledge. Of course the info in this book hundred per cent guarantees there is no doubt in it everbody knows.

Edna Spalding:

Precisely why? Because this Geometrical Methods of Mathematical Physics is an unordinary book that the inside of the reserve waiting for you to snap that but latter it will shock you with the secret the idea inside. Reading this book adjacent to it was fantastic author who have write the book in such wonderful way makes the content on the inside easier to understand, entertaining approach but still convey the meaning totally. So, it is good for you because of not hesitating having this anymore or you going to regret it. This amazing book will give you a lot of benefits than the other book get such as help improving your skill and your critical thinking technique. So, still want to delay having that book? If I ended up you I will go to the reserve store hurriedly.

Sandra Black:

Do you have something that you want such as book? The book lovers usually prefer to choose book like comic, short story and the biggest you are novel. Now, why not seeking Geometrical Methods of Mathematical Physics that give your pleasure preference will be satisfied through reading this book. Reading practice all over the world can be said as the way for people to know world a great deal better then how they react to the world. It can't be stated constantly that reading routine only for the geeky particular person but for all of you who wants to end up being success person. So , for all you who want to start looking at as your good habit, it is possible to pick Geometrical Methods of Mathematical Physics become your own personal starter.
