Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials) From Woodhead Publishing

Magnetic nanowires and microwires are key tools in the development of enhanced devices for information technology (memory and data processing) and sensing. Offering the combined characteristics of high density, high speed, and non-volatility, they facilitate reliable control of the motion of magnetic domain walls; a key requirement for the development of novel classes of logic and storage devices.

Part One introduces the design and synthesis of magnetic nanowires and microwires, reviewing the growth and processing of nanowires and nanowire heterostructures using such methods as sol-gel and electrodeposition combinations, focused-electron/ion-beam-induced deposition, chemical vapour transport, quenching and drawing and magnetic interactions. Magnetic and transport properties, alongside domain walls, in nano- and microwires are then explored in Part Two, before Part Three goes on to explore a wide range of applications for magnetic nano- and microwire devices, including memory, microwave and electrochemical applications, in addition to thermal spin polarization and configuration, magnetocaloric effects and Bloch point dynamics.

- Detailed coverage of multiple key techniques for the growth and processing of nanowires and microwires
- Reviews the principles and difficulties involved in applying magnetic nano- and microwires to a wide range of applications
- Combines the expertise of specialists from around the globe to give a broad overview of current and future trends

Editorial Review

From the Back Cover

Magnetic nanowires and microwires are key tools in the development of enhanced devices for information technology (memory and data processing) and sensing. Offering the combined characteristics of high density, high speed, and non-volatility, they facilitate reliable control of the motion of magnetic domain walls; a key requirement for the development of novel classes of logic and storage devices.

Part One introduces the design and synthesis of magnetic nanowires and microwires, reviewing the growth and processing of nanowires and nanowire heterostructures using such methods as sol-gel and electrodeposition combinations, focused-electron/ion-beam-induced deposition, chemical vapour transport, quenching and drawing and magnetic interactions. Magnetic and transport properties, alongside domain walls, in nano- and microwires are then explored in Part Two, before Part Three goes on to explore a wide range of applications for magnetic nano- and microwire devices, including memory, microwave and electrochemical applications, in addition to thermal spin polarization and configuration, magnetocaloric effects and Bloch point dynamics.

Users Review

From reader reviews:

Dorothy Pierce:

The book Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials) make one feel enjoy for your spare time. You can use to make your capable a lot more increase. Book can being your best friend when you getting stress or having big problem with the subject. If you can make examining a book Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials) to become your habit, you can get considerably more advantages, like add your personal capable, increase your knowledge about some or all subjects. You can know everything if you like open up and read a book Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials). Kinds of book are a lot of. It means that, science reserve or encyclopedia or other folks. So , how do you think about this book?

Thomas Krieg:

Do you like reading a book? Confuse to looking for your selected book? Or your book was rare? Why so many concern for the book? But just about any people feel that they enjoy regarding reading. Some people likes reading, not only science book and also novel and Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials) or even others sources were given understanding for you. After you know how the great a book, you feel want to read more and more. Science guide was created for teacher or even students especially. Those ebooks are helping them

to add their knowledge. In some other case, beside science book, any other book likes Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials) to make your spare time a lot more colorful. Many types of book like this.

Terry Tatum:

As a student exactly feel bored to reading. If their teacher asked them to go to the library or make summary for some reserve, they are complained. Just minor students that has reading's heart or real their pastime. They just do what the teacher want, like asked to the library. They go to there but nothing reading critically. Any students feel that looking at is not important, boring and can't see colorful images on there. Yeah, it is being complicated. Book is very important in your case. As we know that on this era, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. Therefore , this Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials) can make you truly feel more interested to read.

Duane Coley:

Reading a guide make you to get more knowledge from the jawhorse. You can take knowledge and information originating from a book. Book is created or printed or outlined from each source in which filled update of news. In this modern era like now, many ways to get information are available for an individual. From media social including newspaper, magazines, science guide, encyclopedia, reference book, fresh and comic. You can add your understanding by that book. Isn't it time to spend your spare time to spread out your book? Or just searching for the Magnetic Nano- and Microwires: Design, Synthesis, Properties and Applications (Woodhead Publishing Series in Electronic and Optical Materials) when you essential it?
